

OpenAI

What OpenAI filing its S-1 actually means for builders

swipe →

1

Both labs, one week

Anthropic filed June 1. OpenAI filed June 8.

Together: \$1.8 trillion on paper. The VC era of AI is ending.

2

The numbers in the filing

\$852B valuation. \$13.1B revenue last year, running at ~\$2B/month now. 900M weekly users. Still not profitable.

3

What changes for builders

Public companies answer to quarterly earnings. API pricing, free tiers, developer grants all face scrutiny that private labs don't.

4

What I'd watch

OpenAI said 'has not decided on timing.' The filing is optional. Once the S-1 is public, the roadmap is too.

The question I keep sitting with

I build on Claude. When these labs go public, their roadmap commitments become part of the prospectus. What do I want that document to actually say?
