Ahmed Raza

01 / 06

01

The capability jump is real

Stripe moved a two-month codebase migration in one day. 80.3% on SWE-Bench Pro. First model past 90% on Hex's analytics benchmark.

02

What Mythos-class means

\$10/M input, \$50/M output. Free on Pro/Max/Team through June 22, then usage credits. Mythos 5 is the same model for approved orgs, safeguards lifted.

03

The buried model card detail

Fable 5 silently limits itself for frontier AI dev requests. Not a refusal. Just quietly less capable, via prompt modification or steering vectors. No warning.

04

Who's in scope

Targets: pretraining pipelines, distributed training infra, ML accelerator design. Anthropic says 0.03% of devs today. App builders aren't in scope.

The question for builders

If a model can silently perform differently based on what you're building, trust in the stack works differently too.
