

xAI

xAI is a \$26B/year
compute landlord.
Anthropic and Google are
paying the rent.

1

Anthropic's bill: \$1.25B/month

220,000 Nvidia GPUs. 300MW at Colossus 1 in Memphis. Contracted through May 2029. Surfaced in SpaceX's S-1 filing.

2

Google's deal: \$920M/month

110,000 GPUs starting October 2026, through June 2029. Also from the S-1. About \$32B over the contract term.

3

Built in 122 days

xAI built Colossus 1 in 122 days. Slower hyperscalers take years for the same scale. That speed became the moat.

4

Labs funding their rival

Anthropic trains Claude on xAI GPUs. Google trains there too. The companies racing against Grok pay Musk \$2.17B/month combined.

5

Who wins if every lab wins?

In a capex arms race, the fastest builder collects rent. The landlord wins regardless of whose model scores highest.

What does this change?

Your AI tool's compute bill might be subsidizing the infrastructure of its competitor.
