# 01

## What happened

On June 13, the US government ordered Anthropic to suspend all access to Fable 5 and Mythos 5 by foreign nationals. Anthropic disabled both models globally within hours.

# 02

## Who triggered it

Amazon CEO Andy Jassy reportedly told Treasury Secretary Scott Bessent about jailbreaks found in Fable 5 by Amazon researchers. Trump's AI czar David Sacks says Anthropic refused to fix them.

# 03

## The conflict

Amazon has invested billions in Anthropic and distributes its models on AWS. The CEO who helped trigger the access ban is also one of Anthropic's most powerful commercial partners.

# 04

## What Anthropic disputes

The same jailbreak techniques already work on other publicly available models. Anthropic complied but argues the government's rationale would halt all frontier model deployments if applied universally.

# 05

## What builders need to know

Other Claude models are unaffected for now. But governments just proved they can cut off frontier AI access in hours. That is a supply chain risk, not a product bug.

---

# The real question

Is your production AI stack built to survive a supplier going dark overnight?
