

Xiaomi

Xiaomi just shipped a free coding agent that benchmarks higher than Claude Code

swipe →

The benchmark number

MiMo Code scores 62% on SWE-Bench Pro.
Claude Code scores 57%. Five points higher, from
a phone company's first coding agent release.

2

MIT, free, one command

Open source. Built-in MiMo-V2.5-Pro model included free. macOS, Linux, Windows. Install and type 'mimo' to run.

3

Memory most agents skip

A background subagent condenses context while you work. Long 200+ step sessions stay coherent. Most coding agents lose the thread long before that.

4

Real-world A/B results

576 developers, 474 repos, double-blind testing.
Win rate near 50% on short tasks. Rises to 65%+
on complex multi-turn sessions.

What Xiaomi is actually buying

Free tools build developer loyalty fast. Whether MiMo-V2.5-Pro keeps pace as the field improves is the real question.

Does free + open beat better + paid?

The gap narrows over time. Whether it matters by then is the bet.
