Dario Amodei proposed government authority to block AI. Here is what that means if you build on Claude.

01

The essay

On June 10, Dario Amodei published 'Policy on the AI Exponential'. Binding, enforceable regulation for frontier AI models. Not voluntary guidelines.

02

The aviation model

FAA-style: mandatory third-party testing in 4 risk areas (cybersecurity, bioweapons, control loss, automated R&D). Government can block or reverse any deployment it deems too risky.

03

The timing

Fable 5 launched June 9. The policy essay calling for government authority to block AI deployments dropped June 10. Writing safety rules the day after shipping your most capable model is deliberate.

04

What builders should watch

Mandatory pre-deployment testing means longer cycles and potential access restrictions. If you build on Claude APIs, this framework shapes what you can and cannot access.

The real question

The lab proposing the safety standard also shapes the threshold. Whether that is reassuring or alarming depends on your read of who benefits from tighter rules.
